Quizzed and unquizzed units within one course: a randomised crossover trial

Kenji Nakamura, Sofia Rossi

Journal of Undergraduate Learning Research (fictional), 2023, 14(1), 30-38

Abstract

In a crossover trial with 88 students, each student was quizzed on two of four course units chosen at random. Unit-test scores were 5.2 points higher for quizzed units.

1. Methods

Design: randomised crossover trial within one course. Participants: 88 students in an introductory psychology course. Procedure: for each student, two of the four units were randomly chosen to include weekly quizzes. Outcome: unit-test score (0-100).

2. Results

Scores were 5.2 points higher on quizzed units than on unquizzed units (95% CI 2.4 to 8.0).

3. Limitations

Learning from quizzed units may have carried over to unquizzed units, and the trial ran in a single course.
