# Peer-led team learning in introductory chemistry: a cluster-randomised trial

Wei Chen, Laura Bianchi

*Journal of Undergraduate Learning Research (fictional)*, 2021, 12(2), 64-75

## Abstract

Thirty-six sections of introductory chemistry were randomised to peer-led team learning or to standard recitations. Final-exam performance improved (Hedges g = 0.27).

## 1. Methods

Design: cluster-randomised trial with course section as the unit. Participants: 1,128 students enrolled in 36 sections. Intervention: weekly peer-led team-learning workshops in small groups. Comparator: standard teaching-assistant recitations. Primary outcome: score on a common final exam.

## 2. Results

Final-exam scores were higher in peer-led sections (Hedges g = 0.27, 95% CI 0.09 to 0.45), accounting for clustering.

## 3. Limitations

Peer leaders differed in experience, and the trial was run at one institution.
