Spaced online quizzing in introductory statistics: a randomised crossover trial

Mette Eriksen, Jorge Salas

Journal of Undergraduate Learning Research (fictional), 2022, 13(3), 160-168

Abstract

Students took spaced online quizzes during some units and not others, in random order. Unit-test scores were 6.4 percentage points higher after spaced quizzing.

1. Methods

Design: randomised crossover trial. Participants: 96 students enrolled in introductory statistics. Intervention: spaced online quizzes on the unit's material during three of six units, assigned in random order. Comparator: the same units without quizzes. Primary outcome: unit-test score (percentage).

2. Results

Unit-test scores were 6.4 percentage points higher for units with spaced quizzing (mean difference 6.4, 95% CI 3.1 to 9.7).

3. Limitations

Carry-over between units cannot be ruled out, and the trial involved a single course and instructor.
